

Neuroscience Lab Report: Alpha-Synuclein Study

Page 1 - Introduction: Cats and biological models.

In this study, we observe that cats like to sleep for 16 hours a day.

This behavior is crucial for neural recovery in feline models.

Page 2 - Methods and Materials

We used a concentration of 5mg/mL for the seeding assay.

The incubation period was 72 hours at 37 degrees Celsius.

Data was collected using fluorescence microscopy.

Page 3 - Final Conclusion

The results indicate that high-protein diets improve feline memory.
Future research should focus on Tau pathology in older subjects.
